DETAILED ACTION

Allowable Subject Matter

1. Claims 1-18 are allowed.
2. The following is an examiner's statement of reasons for allowance:

First of all, applicants' response has overcome the objections to the specification. Secondly, applicants' response has overcome the objection to the drawings, as Figs. 10 and 13-16 do show the claim 6 and 8 configurations.

As far as amended claims 1 and 10 are concerned, such have been amended to include first and second predetermined processing at the first and second processors, and that the clock frequency input to the first processor is based upon a ratio of the processing time necessary to complete the first predetermined processing and a processing time of the second processor necessary to complete the second predetermined processing. It is important to note that the ration is calculated based upon the processing times necessary to complete the predetermined processing. In contrast, the references relied upon by the examiner do not have the predetermined processing upon which to base the ratio. Tatsuhiko waits until after a predetermined period of time has elapsed to then count the request processing frequency and thus adjust the clock frequencies. Such is not what is now claimed. Neither Mizuno nor the other references of record cure this deficiency, noting especially, as pointed to by applicants, that at [0016] of Mizuno that the working speed of each element processor is independently determined by making it change with the loads of the element processor, thus teaching against the now claimed subject matter.
